

DEMENTIA CARE

Empowering caregivers to navigate the challenges of dementia.

Every 65 seconds in America, someone is diagnosed with a form of dementia. Often, care falls on family members who lack information or available resources to be able to provide the higher level of care these loved ones require.

We can help. We equip and empower caregivers to navigate the challenges of dementia while providing wide-ranging care, resources and support for patients and their loved ones, throughout the disease's full progression.

Our Dementia Care Program offers:

- No cost consult to help identify community resources and educational needs
- Advance care planning, pain, and/or symptom management by a family nurse practitioner
- Professional RN assessment for care planning needs (fee for service)
- Respite care provided by licensed CNAs (fee for service) or volunteer trained in dementia care
- No cost educational offerings including nutrition, fall prevention and safety, self-care, and more
- Scheduled follow-up phone contact to ensure caregivers are not forgotten.

BE SUPPORTED

Let us help you care for your loved one living with dementia.

As the number of dementia and Alzheimer's patients increases, so does the need for care and support for both patients and their caregivers. Our goal is to improve the lives of families challenged by this disease by providing professional counseling, respite care, educational training, and alternative therapies.

By better understanding the disease and how it affects the brain, while learning specific techniques to enhance communication with your loved one, we can help you learn the skills to improve quality of life for everyone involved.

Call us directly.
We are a resource for you.
